this book assembles a wide range of explanatory perspectives on social inequalities in health everywhere in the world those with less advantage die younger and suffer more illness than the wealthy decades of research have documented this reality and yet we lack a comprehensive understanding of the mechanisms through which social circumstances ultimately influence the biological processes that lead to disease explanations have been proposed from various disciplines economics psychology behavioral science geography and neuroscience and each sheds light on parts of the overall process but very few texts assemble these insights into an overall explanatory paradigm through a review of concepts and theories from a wide range of disciplines the author outlines how these may be woven together to offer a more complete picture of how social influences get under the skin to affect health and disease as well as understanding individual health the book assembles explanations for social disparities in health it concludes with a proposal for a set of explanatory models that cross disciplinary boundaries topics explored include social inequalities in health explanation and causal models for social epidemiology social and economic theories to explain patterns of disease biological pathways linking social determinants to health theoretical models of health behavior work environment and health social networks social support and health positive influences on health coping and control the relationship between personality and health understanding health determinants explanatory theories for social epidemiology is a textbook for graduate students in epidemiology health sciences health policy and

psychology as well as social science students who are studying health it will also be of interest to general readers and can serve as a reference for researchers in epidemiology and the health sciences who are planning studies of the social determinants of health the book reviews theories that could be tested in such studies

how do policy and politics influence the social conditions that generate health outcomes reduced life expectancy worsening health outcomes health inequity and declining health care options these are now realities for most americans however in a country of more than 325 million people addressing everyone s issues is challenging how can we effect beneficial change for everyone so we all can thrive what is the great equalizer in this book daniel e dawes argues that political determinants of health create the social drivers including poor environmental conditions inadequate transportation unsafe neighborhoods and lack of healthy food options that affect all other dynamics of health by understanding these determinants their origins and their impact on the equitable distribution of opportunities and resources we will be better equipped to develop and implement actionable solutions to close the health gap dawes draws on his firsthand experience helping to shape major federal policies including the affordable care act to describe the history of efforts to address the political determinants that have resulted in health inequities taking us further upstream to the underlying source of the causes of inequities dawes examines the political decisions that lead to our social conditions makes the social determinants of health more accessible and provides a playbook for how we can address them effectively a thought provoking and evocative account that considers both the policies we think of as health policy and those that we don t the political determinants of health provides a novel multidisciplinary framework for addressing the systemic barriers preventing the united states from becoming the healthiest nation in the world

this timely book takes seriously the idea of understanding how our social world and not individual responsibility or the healthcare system is the primary determinant of our health kathryn strother ratcliff puts into practice the upstream imagery from public health discourse which locates the causes and solutions of health problems within the social environment each chapter explains how the policies politics and power behind corporate and governmental decisions and actions produce unhealthy circumstances of living such as poverty pollution dangerous working conditions and unhealthy modes of food production and demonstrates that putting profit and politics over people is unhealthy and unsustainable while the book examines how these unhealthy conditions of life generate significant class and ethnic health disparities the focus is on everyone s health arguing that none of us should be placed in health threatening situations that could have been prevented ratcliff s provocative analysis uses social justice and human rights lenses to guide the discussion upstream toward possible changes that should produce a healthier world for us all using data and ideas from many disciplines the book provides a synthesis of invaluable information for activists and policymakers as well as for professionals and students in sociology public health and other fields related to health

this volume looks at the key links between social determinants health disparities and health and health care there is a particular focus on macro level systems and micro level issues including the examination of issues for patients carers and providers of care

if you ask most people what influences health almost invariably the first reply will be health care the services that individuals receive from physicians nurses and other medical professionals to treat or prevent illness also called medical care many people in fact presume the role of health care medical care in affecting health to be so predominant that they often use the terms health and health care interchangeably many people would probably also

cite behaviors such as diet exercise smoking and use of alcohol or drugs as key influences on health while ample evidence supports the importance of both health care and behaviors for health a compelling body of scientific knowledge now calls for a wider and deeper set of explanations for why some of us experience good health and others do not this body of knowledge challenges us to think beyond common assumptions about the key causes of health and illness to ask not only what influences health but also what factors shape those influences i e what influences the influences this knowledge tells us that to achieve real and lasting improvements in health we must shift the focus to identifying and addressing the root or fundamental causes link and phelan 1995 the underlying factors that set in motion other factors that may be more easily observed but play a less fundamental role in shaping health ethical concerns furthermore require us to focus not only on a population s overall or average health but also on health equity whether everyone has a fair and just opportunity to be as healthy as possible which includes whether the resources opportunities and conditions required for good health are distributed equitably within the population

today more than ever society is faced with the unequivocal question of developing a better understanding of the interconnectedness between social forces environmental experiences and the outcomes of mental and physical health and well being post covid 19 considerations have led to an unprecedented need to establish a more interdisciplinary understanding of the role that social construction has on health and illness and the diverse set of ways that our social world plays in the identification treatment and experience of various diseases and health related conditions social life is intricately linked to quality of life variables related to health both mental and physical thus we recognize the invaluable contribution to the field of medicine made by a comprehensive understanding of health wellness and social functioning as a byproduct of the study of the human body and mind however we posit that this knowledge would be incomplete without examining the close relationship between health wellness and those aspects

of social environment that create conditions that can either strengthen or undermine the wellbeing of individuals groups of people and entire communities the social structural determinants of health

social factors signals and biases shape the health of our nation racism and poverty manifest in unequal social environmental and economic conditions resulting in deep rooted health disparities that carry over from generation to generation in perspectives on health equity and social determinants of health authors call for collective action across sectors to reverse the debilitating and often lethal consequences of health inequity this edited volume of discussion papers provides recommendations to advance the agenda to promote health equity for all organized by research approaches and policy implications systems that perpetuate or ameliorate health disparities and specific examples of ways in which health disparities manifest in communities of color this special publication provides a stark look at how health and well being are nurtured protected and preserved where people live learn work and play all of our nation s institutions have important roles to play even if they do not think of their purpose as fundamentally linked to health and well being the rich discussions found throughout perspectives on health equity and social determinants of health make way for the translation of policies and actions to improve health and health equity for all citizens of our society the major health problems of our time cannot be solved by health care alone they cannot be solved by public health alone collective action is needed and it is needed now

this resource book discusses the economic arguments that could and could not be put forth to support the case for investing in the social determinants of health on average and in the reduction in socially determined health inequalities it provides an overview and introduction into how economists would approach the assessment of the economic motivation to invest in the social determinants of health and socially determined health inequities including

what the major challenges are in this assessment it illustrates the extent to which an economic argument can be made in favour of investment in 3 major social determinants of health areas education social protection and urban development and infrastructure it describes whether education policy social protection and urban development housing and transport policy can act as health policy

punchily written he leaves the reader with a sense of the gross injustice of a world where health outcomes are so unevenly distributed times literary supplement splendid and necessary henry marsh author of do no harm new statesman there are dramatic differences in health between countries and within countries but this is not a simple matter of rich and poor a poor man in glasgow is rich compared to the average indian but the glaswegian s life expectancy is 8 years shorter the indian is dying of infectious disease linked to his poverty the glaswegian of violent death suicide heart disease linked to a rich country s version of disadvantage in all countries people at relative social disadvantage suffer health disadvantage dramatically so within countries the higher the social status of individuals the better is their health these health inequalities defy usual explanations conventional approaches to improving health have emphasised access to technical solutions improved medical care sanitation and control of disease vectors or behaviours smoking drinking obesity linked to diabetes heart disease and cancer these approaches only go so far creating the conditions for people to lead flourishing lives and thus empowering individuals and communities is key to reduction of health inequalities in addition to the scale of material success your position in the social hierarchy also directly affects your health the higher you are on the social scale the longer you will live and the better your health will be as people change rank so their health risk changes what makes these health inequalities unjust is that evidence from round the world shows we know what to do to make them smaller this new evidence is compelling it has the potential to change radically the way we think about health and indeed society

frequently in partnership but sometimes at odds religious institutions and public health institutions work to improve the well being of their communities there is increasing awareness among public health professionals and the general public that the social conditions of poverty lack of education income inequality poor working conditions and experiences of discrimination play a dominant role in determining health status but this broad view of the social determinants of health has largely ignored the role of religious practices and institutions in shaping the life conditions of billions around the globe in religion as a social determinant of public health leading scholars in the social sciences public health and religion address this omission by examining the embodied sacred practices of the world's religions the history of alignment and tension between religious and public health institutions the research on the health impact of religious practice throughout the life course and the role of religious institutions in health and development efforts around the globe in addition the volume explores religion's role in the ongoing epidemics of hiv aids and alzheimer's disease as well as preparations for an influenza pandemic together these groundbreaking essays help complete the picture of the social determinants of health by including religion which has until now been an invisible determinant

social justice is a matter of life and death it affects the way people live their consequent chance of illness and their risk of premature death we watch in wonder as life expectancy and good health continue to increase in parts of the world and in alarm as they fail to improve in others
